## RoboBiz competition

---

**A game of strategy, math & technology!**

**A game of connection, calculation & construction!**

In a one-of-its-kind virtual competition, RoboBiz is a Robotics business game with a stock exchange experience. Objective is to create a Robot for the given task. The parts required for the Robot have to be bought from RoboStock – the company (part of the game & host) which holds all the parts for the game.

**How to buy parts & play the game?** We will tell you before the event.

**How to get money to buy parts?** We will give you virtual money. Real money is not involved.

**How will we get parts?** You already have in your kits. Based on what you buy with your virtual money, you can only use those parts from your kit to make the Robot for the task given.

**Date & venue:** 24 January, 2021 (Sunday) – Online.

**Time:** Evening 3-5 pm.

**Categories:** A) Level 2 B) Level 3

**Eligibility:** The competition is open for students of Eduprime who have completed Level 2 or 3. Students who have completed Level 3 & above in Eduprime Robotics course can participate in Level 3 category of RoboBiz. Participation is subjective as given in Registration.

**Registration:** Considering this is the launch of this competition and it is virtual, we will be accepting only 10 participants for each category. We will first give chance to those who have participated in Monthly Project challenges & winners of lockdown challenges for each category. Thereafter it will be open to others based on their projects & performance.

**Note:** Each participant will need complete kit to participate or chances of winning will reduce. All the parts need to be dismantled and kept well organised. Internet should be good at your home since we won't wait for anyone to reconnect.

**There is nothing to lose, but a lot of experience to gain!**
